

Teleena

An essential part of your business is managed by the intelligence of an HLR. This vital but expensive component of the telco infrastructure enables customer connectivity to a global mobile network. Gain full control now, by using Teleena's cost effective HLR as a Service.

HLR as a Service

"As-a-service concept"

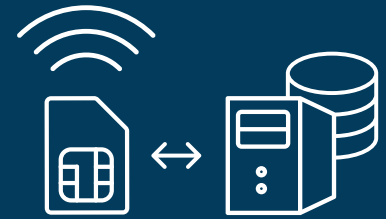

- Fully featured, 3GPP / 4G HSS compliant HLR
- Short time to market enabling launch of new services
- No need to build and operate in-house HLR
- Connected to all MNO networks
- Only OPEX no CAPEX

Do you want to offer the full range of M(V)NO services to your customers without investing? If this sounds interesting to you please contact sales@teleena.com or visit teleena.com.

HLR as-a-service

Key features

MAP services

Broad range of services supported: i.e. alerts, authentication, SMS requests, location information.

Supplementary services

Multiparty calling, identification, call waiting and forwarding services can be offered to customers.

Steering Roaming

Roaming policies can be set to use pre-defined , cost efficient roaming networks.

Virtualized

Each user can have multiple IMSI's to enable seamless connectivity to global networks.

Call routing and SMS

Information to support MT calls and delivery of SMS are fully supported.

Mobility Management

Management features to keep track of subscriber location in the network.

Administration

GUI-based removal of individuals or user groups, restriction policies for specific destinations or groups.

Commercial model

As a Service

OPEX driven, no initial investments needed. Total set up by Teleena: project management, configuration and testing.
